

## Burndown Chart

## Explanation

The burndown chart for sprint 4 has remaining work at a constant zero as the main points were split into smaller tasks that were completed on the day of assigning with an astounding amount of focus and a massive productivity boost by the team. All team members brought their best and completed their tasks daily for an easy sprint. Along with asking for assistance and a magnificent display of teamwork and co-ordination from the team, everything was done efficiently. Our planned velocity was the same compared to Sprint 3. Our velocity did not change because we were all able to successfully complete our tasks, and continuing like this we will be able to complete our project by the end of the semester.
